

# PRIMER PLUS 60 MIXING MACHINE

## *A system approach for preparing and storing primers and hardeners!*

The Primer Plus 60 mixing machine is a new concept that provides a 'system' approach for preparing primers and hardeners.

The stand-alone system includes 9 x gallon mixing places plus ample storage for hardeners since most paint lines have fewer than six primers. Painters will be better organized and more productive from having all components self-contained in one small work area.

Primer Plus addresses critical 'foaming' issues caused from over-stirring primers. Most require only 5-minutes of agitation but typically get 15-minutes (often several times daily) on traditional machines. Primer Plus stirs products to the EXACT specifications set by the paint manufacturer. The timer can also be programmed to run automatically twice daily- including weekends and holidays\*. The first mixing cycle can be programmed to run before the painters arrive at the shop. . . No more downtime waiting for primers to be stirred!

# PRIMER PLUS 60 MIXING MACHINE

The top of the machine features an Alu/Zinc work surface that functions as a table for paint preparation. In addition, the housing is fully-enclosed on three sides to protect products from overspray and shop debris. Primer Plus is an incredible space-saving design that takes up only 26.5" of floor space. (L: 26.5" x W: 16" x H: 44").

*\*The second mixing cycle begins exactly 5 hours and 45 minutes after the first cycle is completed.*

## PRIMER PLUS 60 FEATURES

- Primers and hardeners are stored together for greater convenience.
- Prevents 'foaming' issues from over-stirring. The motor includes a 'slow-start' program to protect belts and machine components from aggressive start-up torque.
- The timer can be programmed to run automatically (twice daily) according to the shop's preferred starting time.
- A compact design that takes up only 26.5" of floor space.
- The top of the machine doubles as a work table for convenient paint preparation.
- Enclosed panels prevent products from overspray and shop debris.
- Features patented Quick-Link™ technology for sure-fire mixing without needing to visually inspect cans to ensure engagement.
- Back-storage shelves are an available option for higher production shops.
- Includes a header board for branding plus the side panels offer additional opportunities to showcase a brand image.
- Fast-assembly with minimal components.
